

Class_2_Homework

Data Prep and Visualization

Load the following Libraries and read in ProductInvoices.csv

```
library(tidyverse)
library(stringr)
library(lubridate)

setwd("/home/ellen/Documents/Spring2020/DA1/Section I/class 2/Class 2 Data Files/")

dfProductInvoices = read_csv("ProductInvoices.csv")
```

Create a bar plot to visualize sales by date, similar to the following:

Group by week and summarize sales. Then plot showing products in colors (*you can use `show.legend = FALSE` in the `geom_bar` function to save a huge display of products*):

Rather than stacking products, show product sales separately (*position = "dodge"*)

Forecast

Now, add a week 4 to the data, with the same sales as week 1. And show that in a stacked bar:
